Specialist restoration: Contemporary prosthodontic facility

FEATURES

- Full refurbishment including services
- Impressive, high quality environment
- Classic design tailored to individual requirements
- Special lighting effects and selective materials
- Completion within tight timescales

CASE STUDY No. 5

DESIGN BRIEF: A renowned dental practice designer recommended Eclipse Dental for the refurbishment of this Prosthodontic surgery which involved incorporating specialist equipment and meeting specific requirements in the design and building specification.

ECLIPSE SOLUTION: The dentist had a good understanding of the equipment and surgery layout he wanted and we worked together with the designer to create an outstanding surgery with a contemporary feel yet sympathetic to the 1930's style surroundings. A separate sterilisation area was included in the surgery which is temporary until further building works are carried out to create a central decontamination room.

In line with the impressive, high quality environment time and effort was invested in preparing the floor and laying the special order flooring to provide an elegant, practical, 'squeak free' surface. The refurbishment also incorporated a microscope and a bespoke suction system which allowed the pump to be placed in the basement.

Reliable and patient friendly equipment complements the surroundings

TIMELESS CABINETRY

A timeless look created by Corian worktops with acrylic fronts and bar handles combined with wood effect vinyl flooring.
